

Technical Leaflet

Resistance of EGGER surfaces to disinfectant

Tested EGGER products

The products listed have been tested in accordance with the test standards EN 438-2 (Decorative high pressure laminate panels HPL - Panels based on curable resins (laminates)) and EN 14323 (Wood-based panels - Melamine faced boards for indoor use) for resistance to disinfectants:

- EGGER Eurodekor
- EGGER Compact laminate
- EGGER Laminate
- EGGER PerfectSense lacquered board Premium

EGGER products Eurodekor, Compact laminate and Laminate are characterised by their consistent melamine-resin surface. PerfectSense, on the other hand, is characterised by its lacquer-based surface.

Normative properties of the surface

EN 438-3 and EN 14322 set out special requirements regarding the resistance of the surface of EGGER products. The criteria for the resistance of surfaces to various substances is the test for stain resistance. Substances that are widely used in everyday life are investigated into how they affect the surface of EGGER Eurodekor, Compact laminate, Laminate and PerfectSense lacquered board. For the purpose of these tests, these substances are brought into direct contact with the surface. The exposure times and conditions for the contact of each substance with the test specimen are examined. At the end of the respective contact period, the test specimens are washed and checked for permanent surface changes.

Please refer to the respective technical data sheets of the EGGER products for the specification of the rating level to be achieved.

Rating scale for testing stain resistance according to EN 14323 and EN 438-2

| Rating level | Requirement |
|--------------|---|
| Rating 5 | No visible change. |
| Rating 4 | Minor change. Only visible when the light source is mirrored on the test surface and is reflected towards the observer's eye, e.g. discolouration, change in gloss level and/or color. |
| Rating 3 | Moderate change. Visible in several viewing directions, e.g. discolouration, change in gloss level and/or color. |
| Rating 2 | Significant change. Visible in all viewing directions, e.g. discolouration, change in gloss level and/or color, and/or structure of the surface slightly changed, e.g. cracking, blistering. |
| Rating 1 | Strong change. Surface damage and/or blistering. |

Laboratory test

After defining the most common active substance bases of disinfectants, these were tested according to the specifications of EN 438-2 test method 26 – stain resistance at ambient temperature – with a contact time of **24 hours**. The test objects are the EGGER products previously mentioned on page 1.

The following active substance bases have been tested in this context – see table below for the results:

| Active ingredient groups | Common substances of the active ingredient groups | Tested active substance bases | Eurodekor, Laminate, Compact laminates | PerfectSense lacquered board Premium Matt & Gloss |
|------------------------------|--|--|---|--|
| Quaternary compounds | Alkyl(C12-16) dimethylbenzyl ammonium chloride, Quaternary ammonium compound | Alkyl(C12-16) dimethylbenzyl ammonium chloride 10% | Rating 5 | Rating 5 |
| Glycol derivatives | Phenoxyethanol, 2-Phenoxyethanol | 2-Phenoxyethanol 10% | Rating 5 | Rating 5 |
| Alcohol | Ethanol, 2-Propanol, Propan-2-ol, Isopropanol, Isopropyl alcohol | Ethanol 50% | Rating 5 | Rating 5 |
| Alcohol | Ethanol, 2-Propanol, Propan-2-ol, Isopropanol, Isopropyl alcohol | Isopropanol 99% | Rating 5 | Rating 5 |
| Peroxide compounds | Hydrogen peroxide | Hydrogen peroxide 5% | Rating 5 | Rating 5 |
| Aldehyde | Formaldehyde, Glyoxal | Formaldehyde 5% | Rating 5 | Rating 5 |
| Aldehyde | Formaldehyde, Glyoxal | Glyoxal 5% | Rating 5 | Rating 5 |
| Organic acids | Formic acid, Citric acid | Formic acid 5% | Rating 4 | Rating 5 |
| Organic acids | Formic acid, Citric acid | Citric acid 5% | Rating 5 | Rating 5 |
| Inorganic acids | Hydrochloric acid | Hydrochloric acid 2% | Rating 3 | Rating 5 |
| Chlorine-releasing compounds | Sodium hypochlorite, sodium hypochlorite | Sodium hypochlorite 2.8% | Rating 5 | Rating 5 |

References

The Association for Applied Hygiene (VAH) provides an overview of common disinfectants and their active substance bases. The disinfectant list of the VAH contains all products listed by the VAH and can be accessed via the following link:

<https://vah-liste.mhp-verlag.de/en/>

For European standards, the ECHA (European Chemicals Agency) is cited. The relevant active substance bases listed in the table can be viewed by selecting the product type filter PT02 via the following link:

<https://echa.europa.eu/information-on-chemicals/biocidal-active-substances>

The Robert Koch Institute has also tested surface disinfectants and published a list of accepted disinfectants:

<https://www.rki.de/DE/Content/Infekt/Krankenhaushygiene/Desinfektionsmittel>

Especially for the US market we refer to the disinfectant recommendation of the EPA. A list of these disinfectants can be found under the following link: <https://www.epa.gov/pesticide-registration/list-n-disinfectants-use-against-sars-cov-2>

Procedure

Based on the active substance bases tested by EGGER, it can be determined whether a specific disinfectant is suitable for use on EGGER surfaces or not. The ingredients of a disinfectant are listed on the label. Otherwise the information can be found in the technical data sheet or safety data sheet of the manufacturer. If the disinfectant contains one of the active substance bases tested on the EGGER products, it can be used for surface disinfection. The respective change of the disinfectant in combination with the specific EGGER product is displayed in the table above.

Guidance on disinfectants

- The manufacturer's instructions for the dosage and application of the disinfectant must be strictly adhered to.
- To ensure that the surface is not affected, special attention must be paid to the concentration, exposure time and application temperature of the chemicals used.
- Observe the specified protective measures and rules of conduct.
- Dispose of disinfectant-soaked wipes immediately after use.
- The use of disinfectants is only carried out in connection with EGGER melamine-resin surfaces and lacquer-based surfaces as surface disinfectants.
- Excessively long dwell times of high moisture can damage the entire area from the panel surface to the edge. This may result in swelling of the EGGER product.
- The use of disinfectants with other detergents or chemicals have not been tested by EGGER.
- During the period of use, EGGER product surfaces must be cleaned regularly. Please refer to our technical data sheet "Cleaning and use recommendations".

The large number of available disinfectants with various ingredients, effects and application recommendations, makes it impossible to issue general approval for the use of disinfectants on EGGER surfaces. For the above reasons and in order to exclude interactions of the main active substances in combination with other ingredients of disinfectants, we recommend testing the disinfectant in advance on a non-visible area of the EGGER surface. Only this approach guarantees the process or the permanence of the material in the desired application.

In the appendix you will find examples of disinfectants tested by EGGER, which are recommended for surface disinfection in compliance with the specified concentration and application time.

Appendix

The following disinfectants have been tested by EGGER according to the specifications of EN 438-2 test method 26 – stain resistance at ambient temperature with a contact time^{*} of 24 hours for Eurodekor and Compact laminate and 16 hours for Laminate and PerfectSense lacquered board.

The unit of the test results is "grade". In addition, in the results column you will find the test results of EGGER products with melamine surfaces named "Eurodekor", "Compact laminate" and "Laminate" and the results of lacquer-based surfaces named "PerfectSense Premium Matt & Gloss". The exact definition of the rating grade can be found in the rating scale for testing stain resistance according to EN 438-2 and EN 14323 mentioned on page 1.
